W https://en.wikipedia.org/wiki/High-bandwidth_Digital_Content_Protection searx.me

In order to make a device that plays HDCP-enabled content, the manufacturer must obtain a license for the patent from Intel subsidiary Digital Content Protection LLC, pay an annual fee, and submit to various conditions.^{[5][6][7]} For example, the device cannot be designed to copy; it must "frustrate attempts to defeat the content protection requirements";^[7] it must not transmit high definition protected video to non-HDCP receivers; and DVD-Audio works can be played only at CD-audio quality^[7] by non-HDCP digital audio outputs (analog audio outputs have no quality limits).

Cryptanalysis researchers demonstrated flaws in HDCP as early as 2001. In September 2010, an HDCP master key that allows for the generation of valid device keys was released to the public, rendering the key revocation feature of HDCP useless.^{[8][9]} Intel has confirmed that the crack is real,^[10] and believes the master key was **reverse engineered** rather than leaked.^[11] In practical terms, the impact of the crack has been described as "the digital equivalent of **pointing a video camera at the TV**", and of limited importance for consumers because the encryption of high-definition discs has been **attacked directly**, with the loss of interactive features like menus.^[12] Intel threatened to sue anyone producing an unlicensed device.^[11]
